Presenting Plannr

One source of truth for every academic update.

 Paras

 Sonal

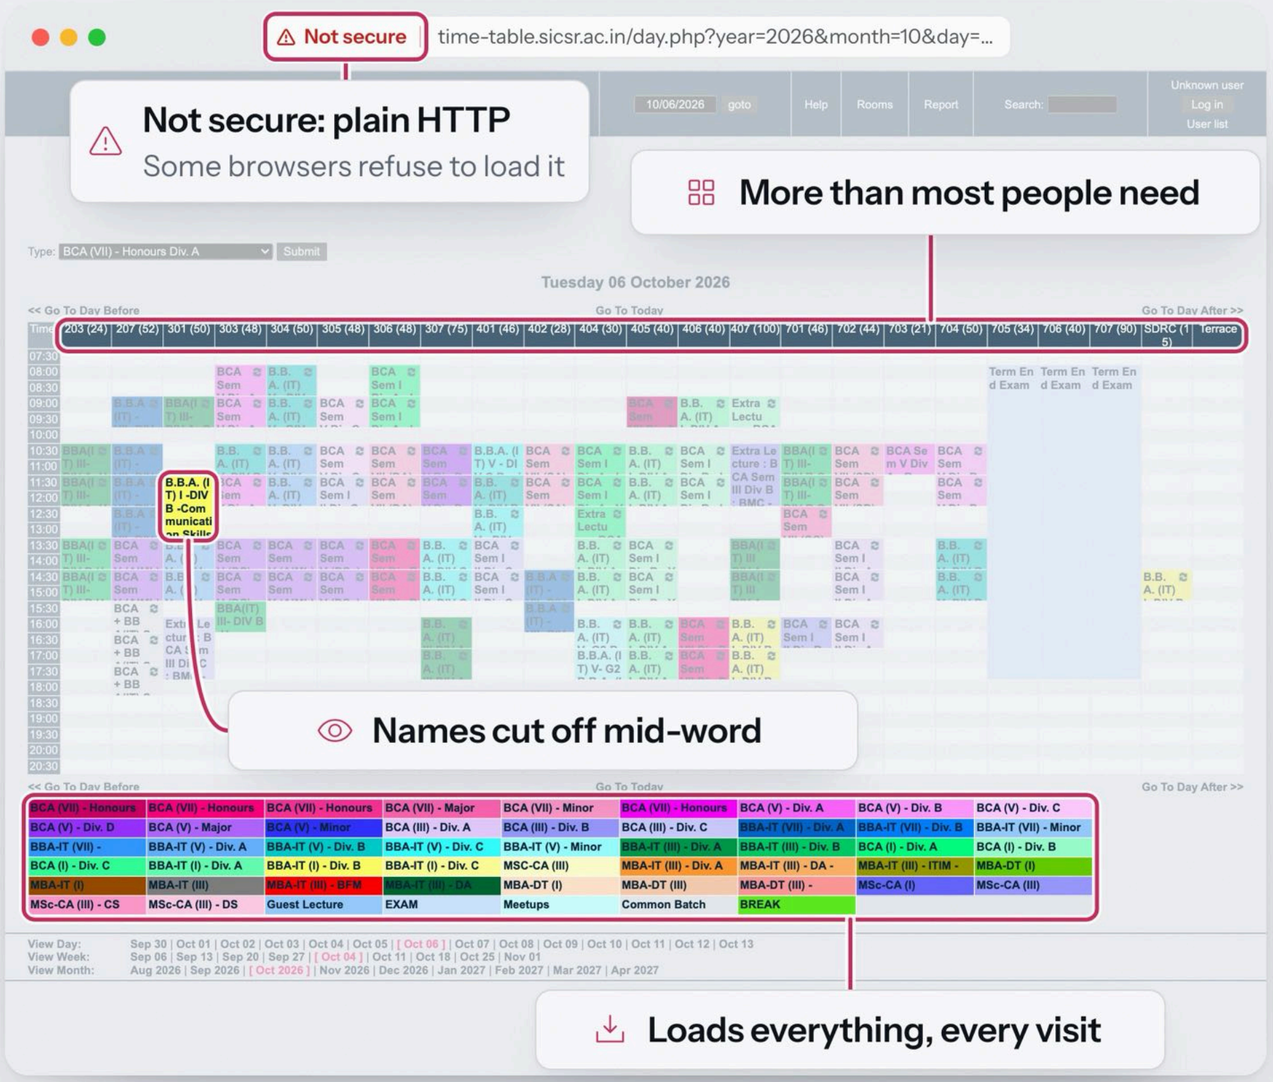

R Ravya

T Tanisha

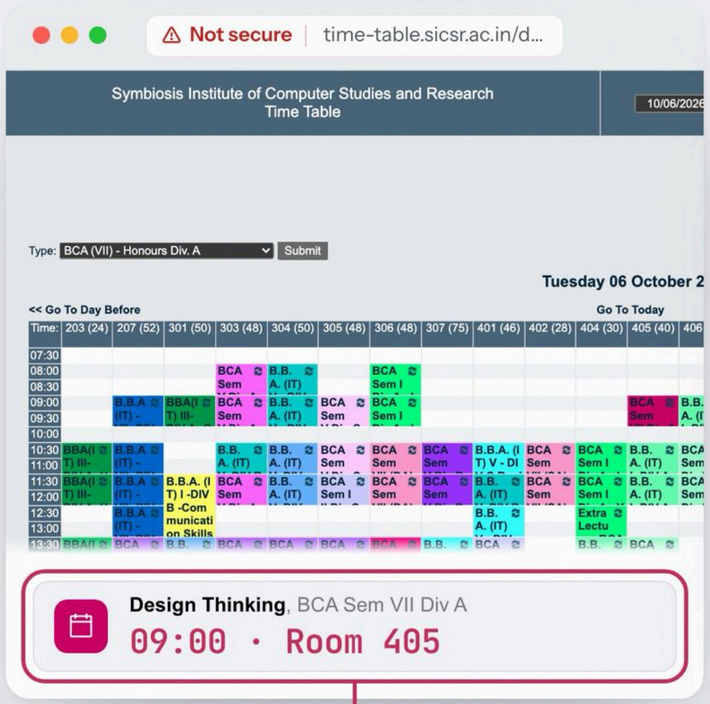

SICSR, Pune · 2026

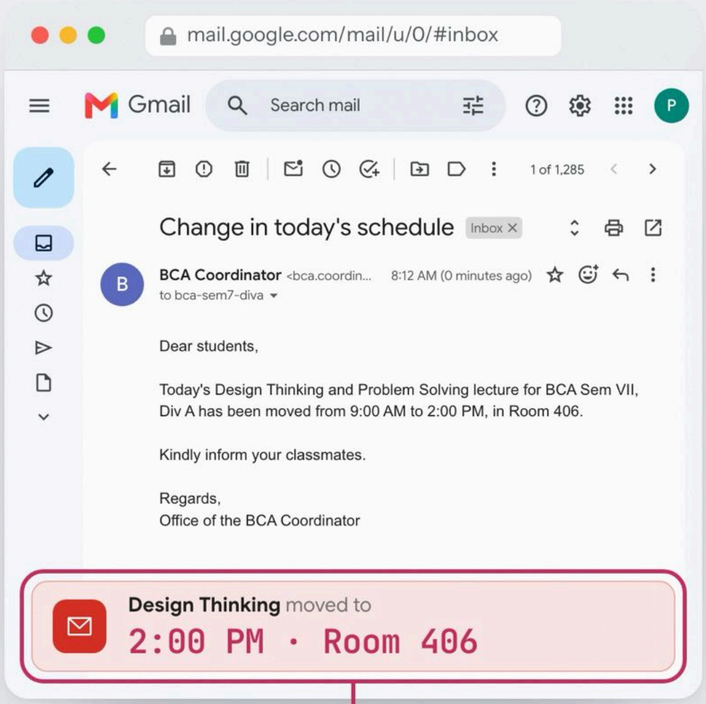

We wanted to simplify everyone's schedules.

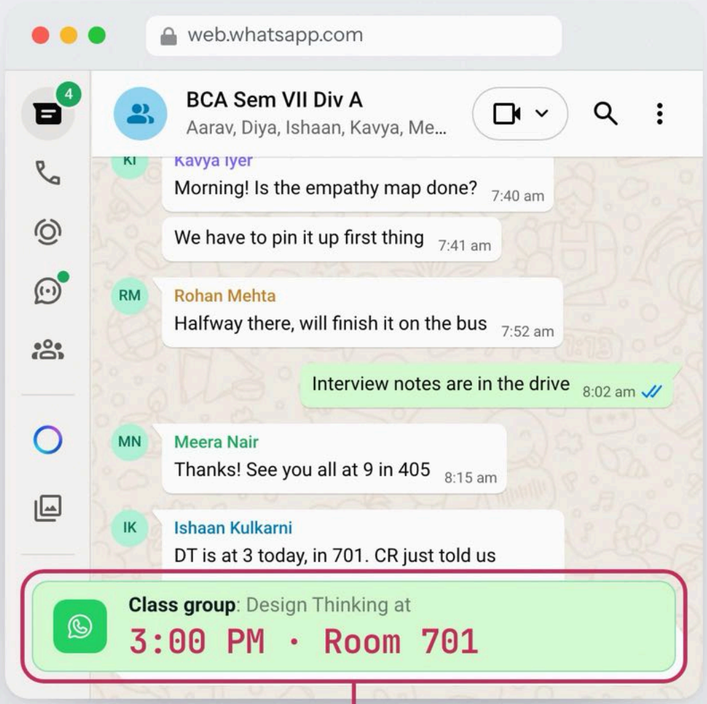

Plannr combines the best features from all the apps you already use and gives you a single place to look at.

Three places and conflicting information.

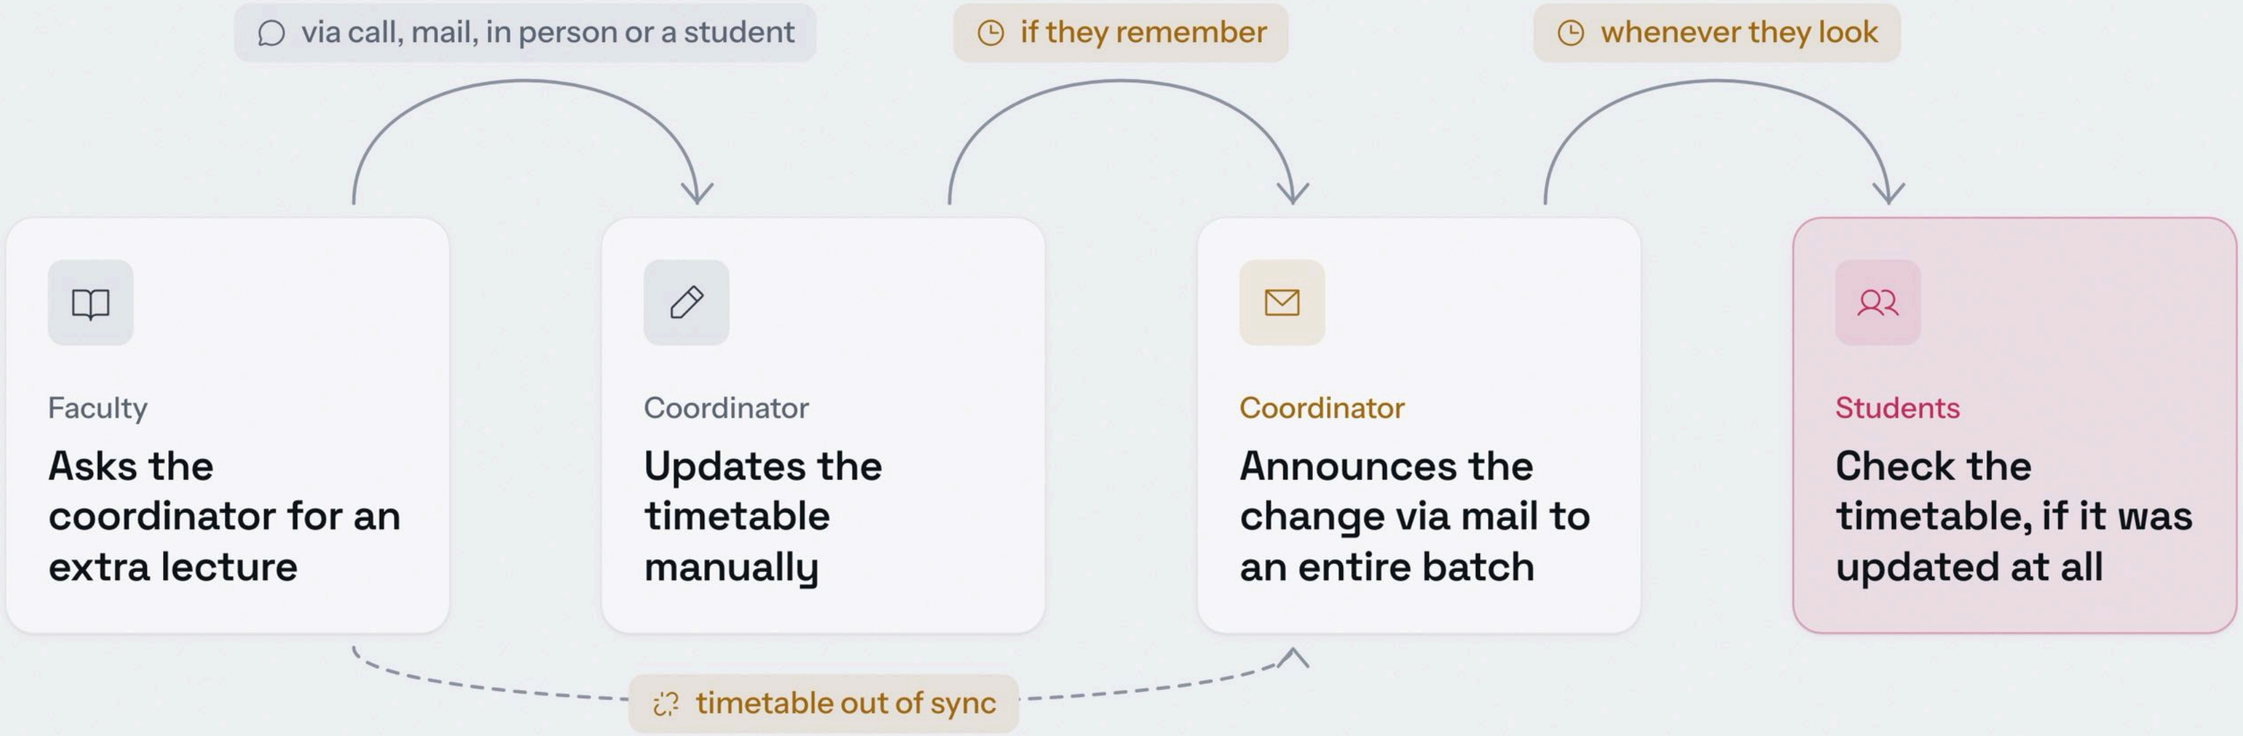

Which one is right?

How extra lectures are scheduled right now.

Three human points of failure that can be easily automated.

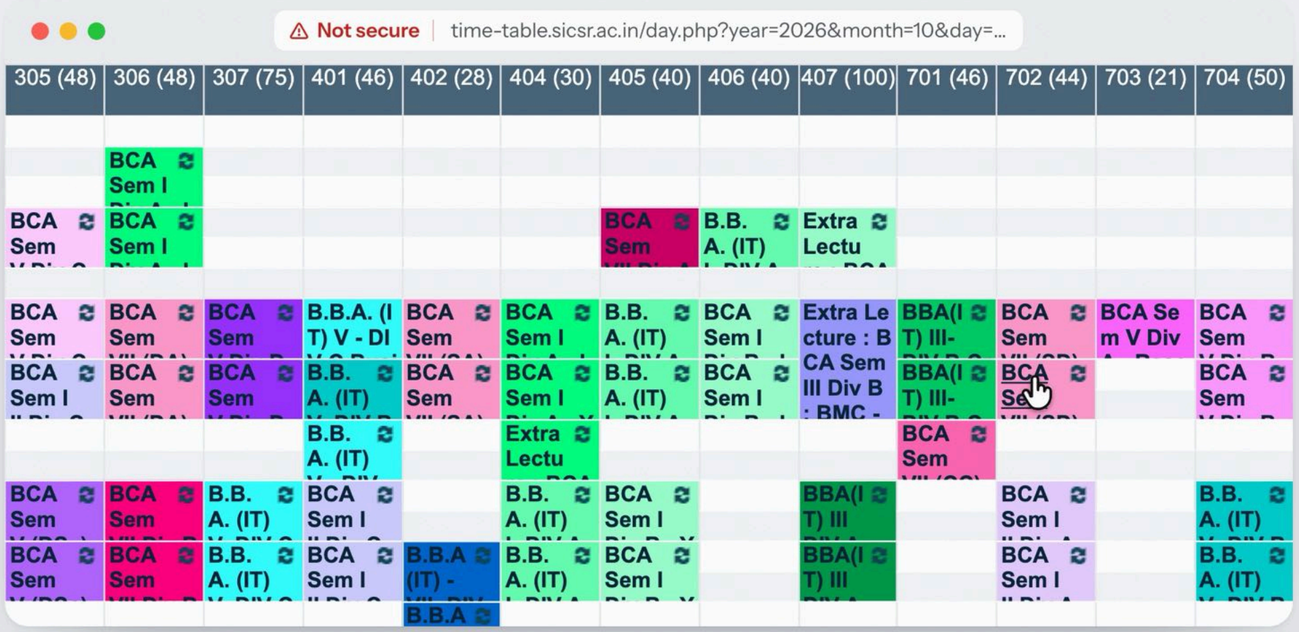

There’s no page for a person.

To find one teacher, you read the timetable of every course they might teach.

Where is Dr. Nagane right now?

A BCA Sem VII student · 11:44

If you know their classes: hover each one

Waiting for tooltips

0:05

That’s just the start.

How we did the research.

One stakeholder each

Four of us, four kinds of user. Each of us owned one.

Interviews, then a survey

We heard their day first, then checked it with numbers.

Their day first

We asked how they work, then what would help.

Patterns before features

Nothing was designed until every routine was mapped.

Four kinds of people use the timetable. Not one.

Out of scope

During our research we found they play little part in running the timetable and Moodle.

We asked about their day first.

We asked

- How do you find and follow your schedule?
- What goes wrong with how you do it now?
- How do you work around it?
- Which apps do you use for it?
- Walk me through your day. What would help?

We didn't ask

- ~~Which features would you like?~~
- ~~What should we build?~~

Photo: Matthew Yohe, CC BY-SA 3.0, via Wikimedia Commons

> A lot of times, people don’t know what they want until you show it to them.

Steve Jobs

Co-founder and CEO, Apple · BusinessWeek, May 1998

Our users had learned to work around it. Our job was to make the process simpler.

What we set out to automate.

Core

The heart of the job

5 of 5

- Timetable
- Attendance
- Class scheduling
- Class tracking
- Tests
- Assignments

Future

A far stretch, for later

1 of 5

- File uploads
- Course material
- Everything else

Score = reach × severity × scope

Students, in their own words.

15
answered open questions

11
took the survey

2
years: third and fourth

Four open questions about their day

A survey on habits and problems

Some answered in pairs

> Many times classes change with no email about it or cancel at the wrong moment
>
> Student, SICSR

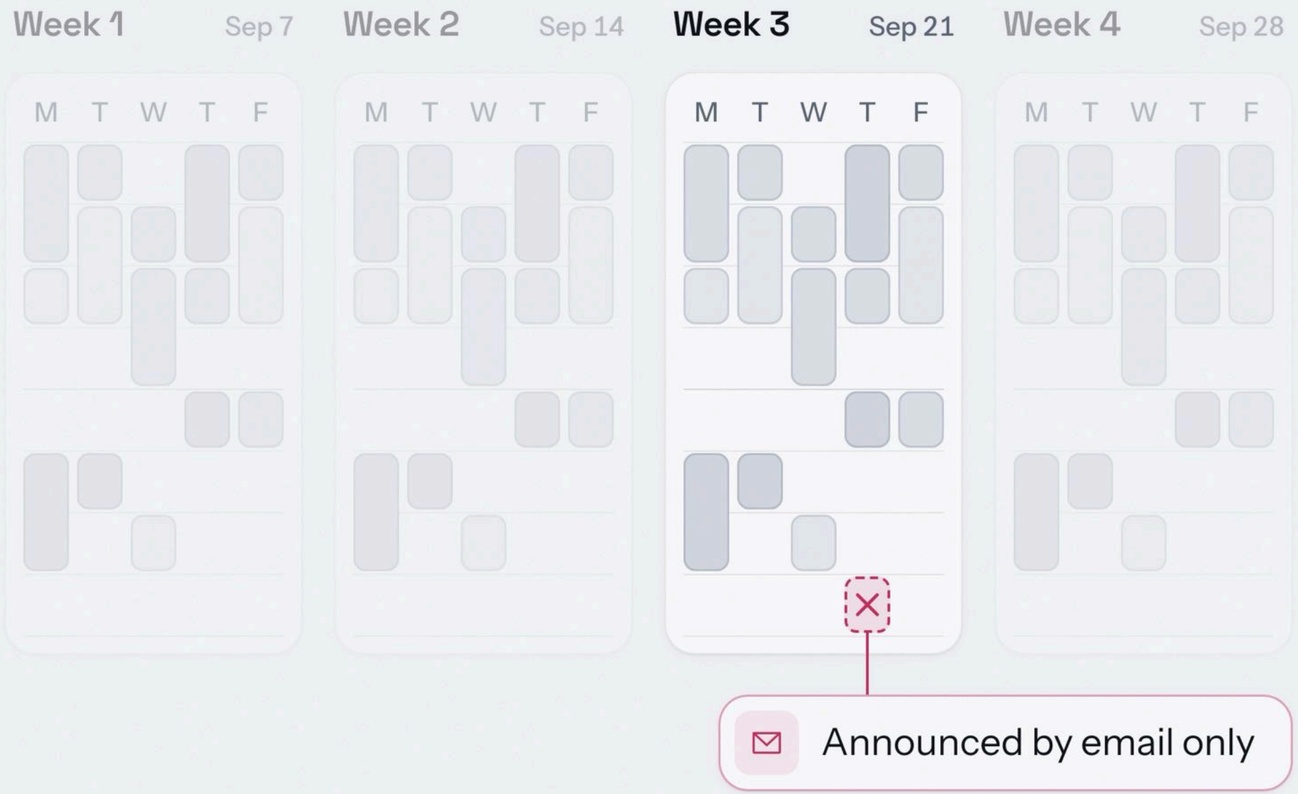

"Save it in my calendar so don't need to check but not able to update it if any changes"

Student, SICSR

"No problem faced with the current method as of now."

Student, SICSR

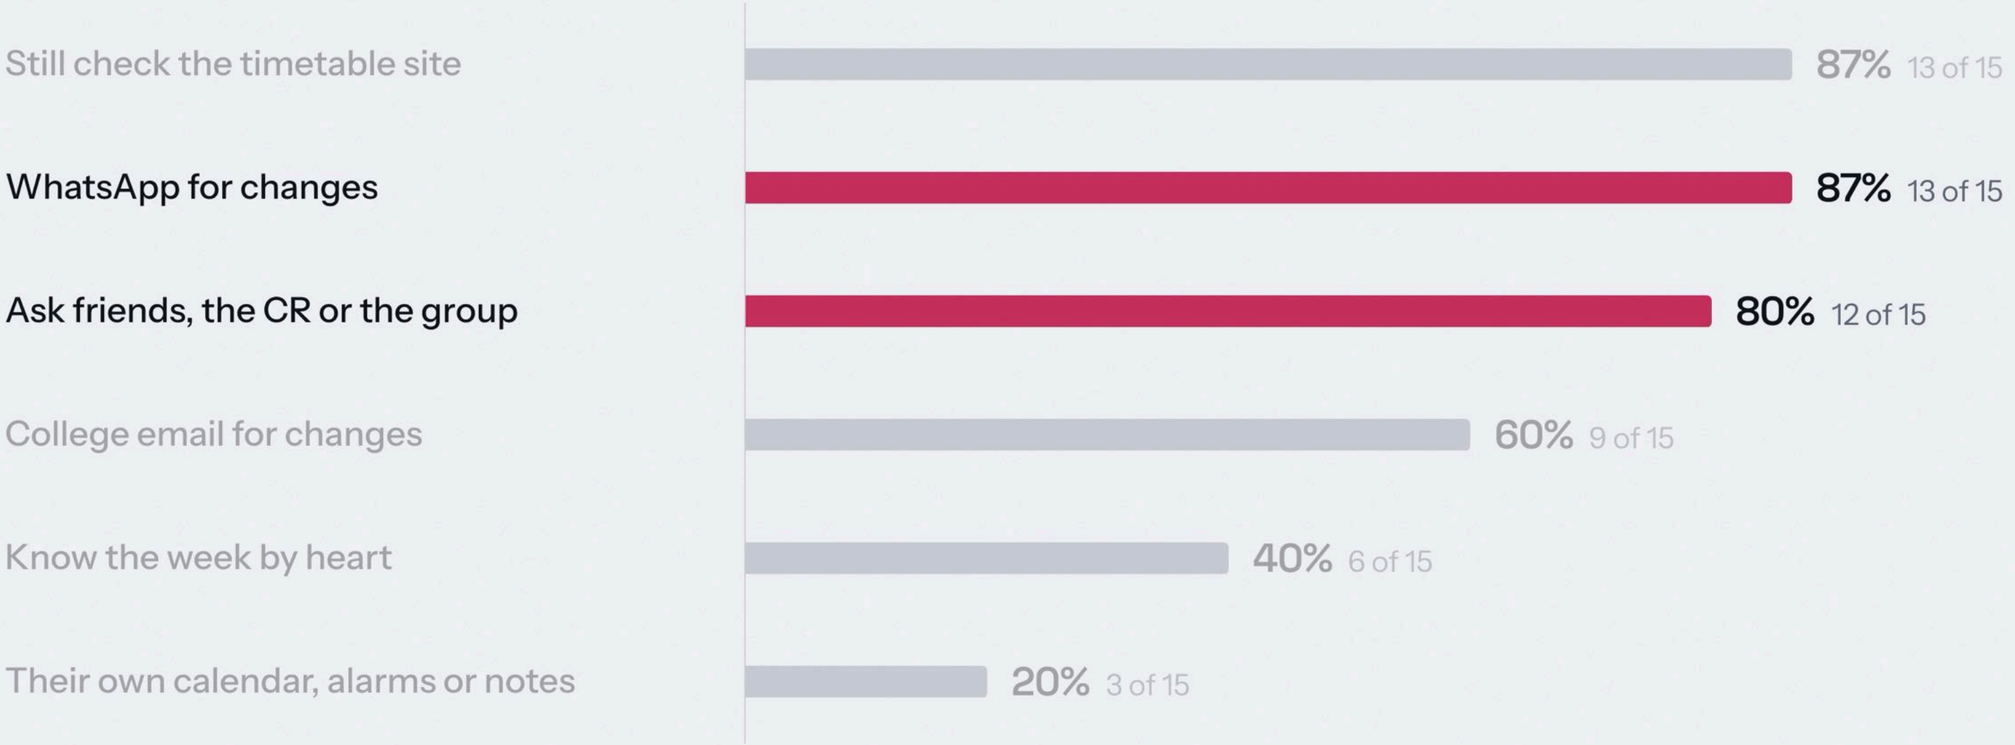

Most weeks look the same. The one that doesn't is the problem.

53% of the 15 who answered the open questions say changes come late

How they keep up.

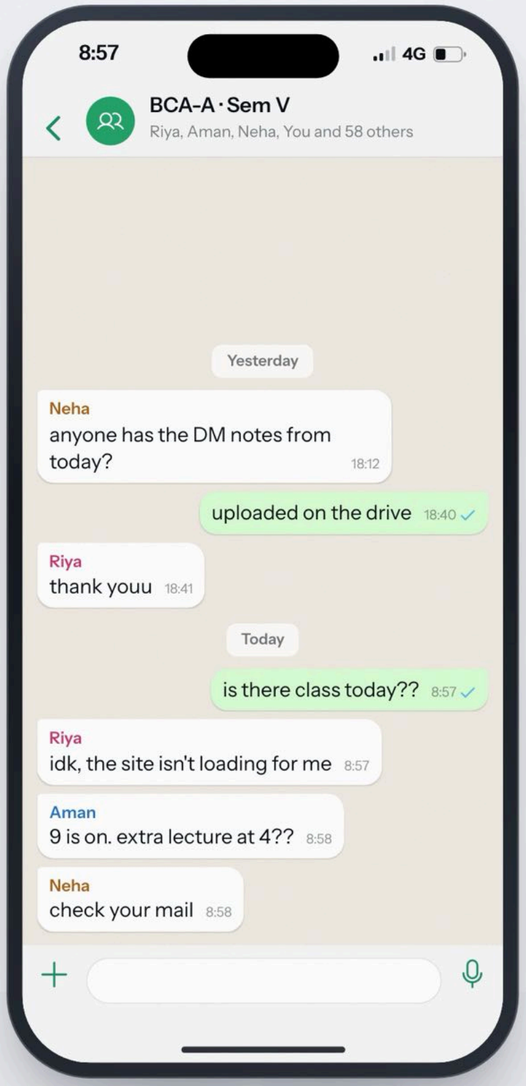

The site is still open, but the news travels on WhatsApp and by word of mouth.

Answers from 15 students to four open questions

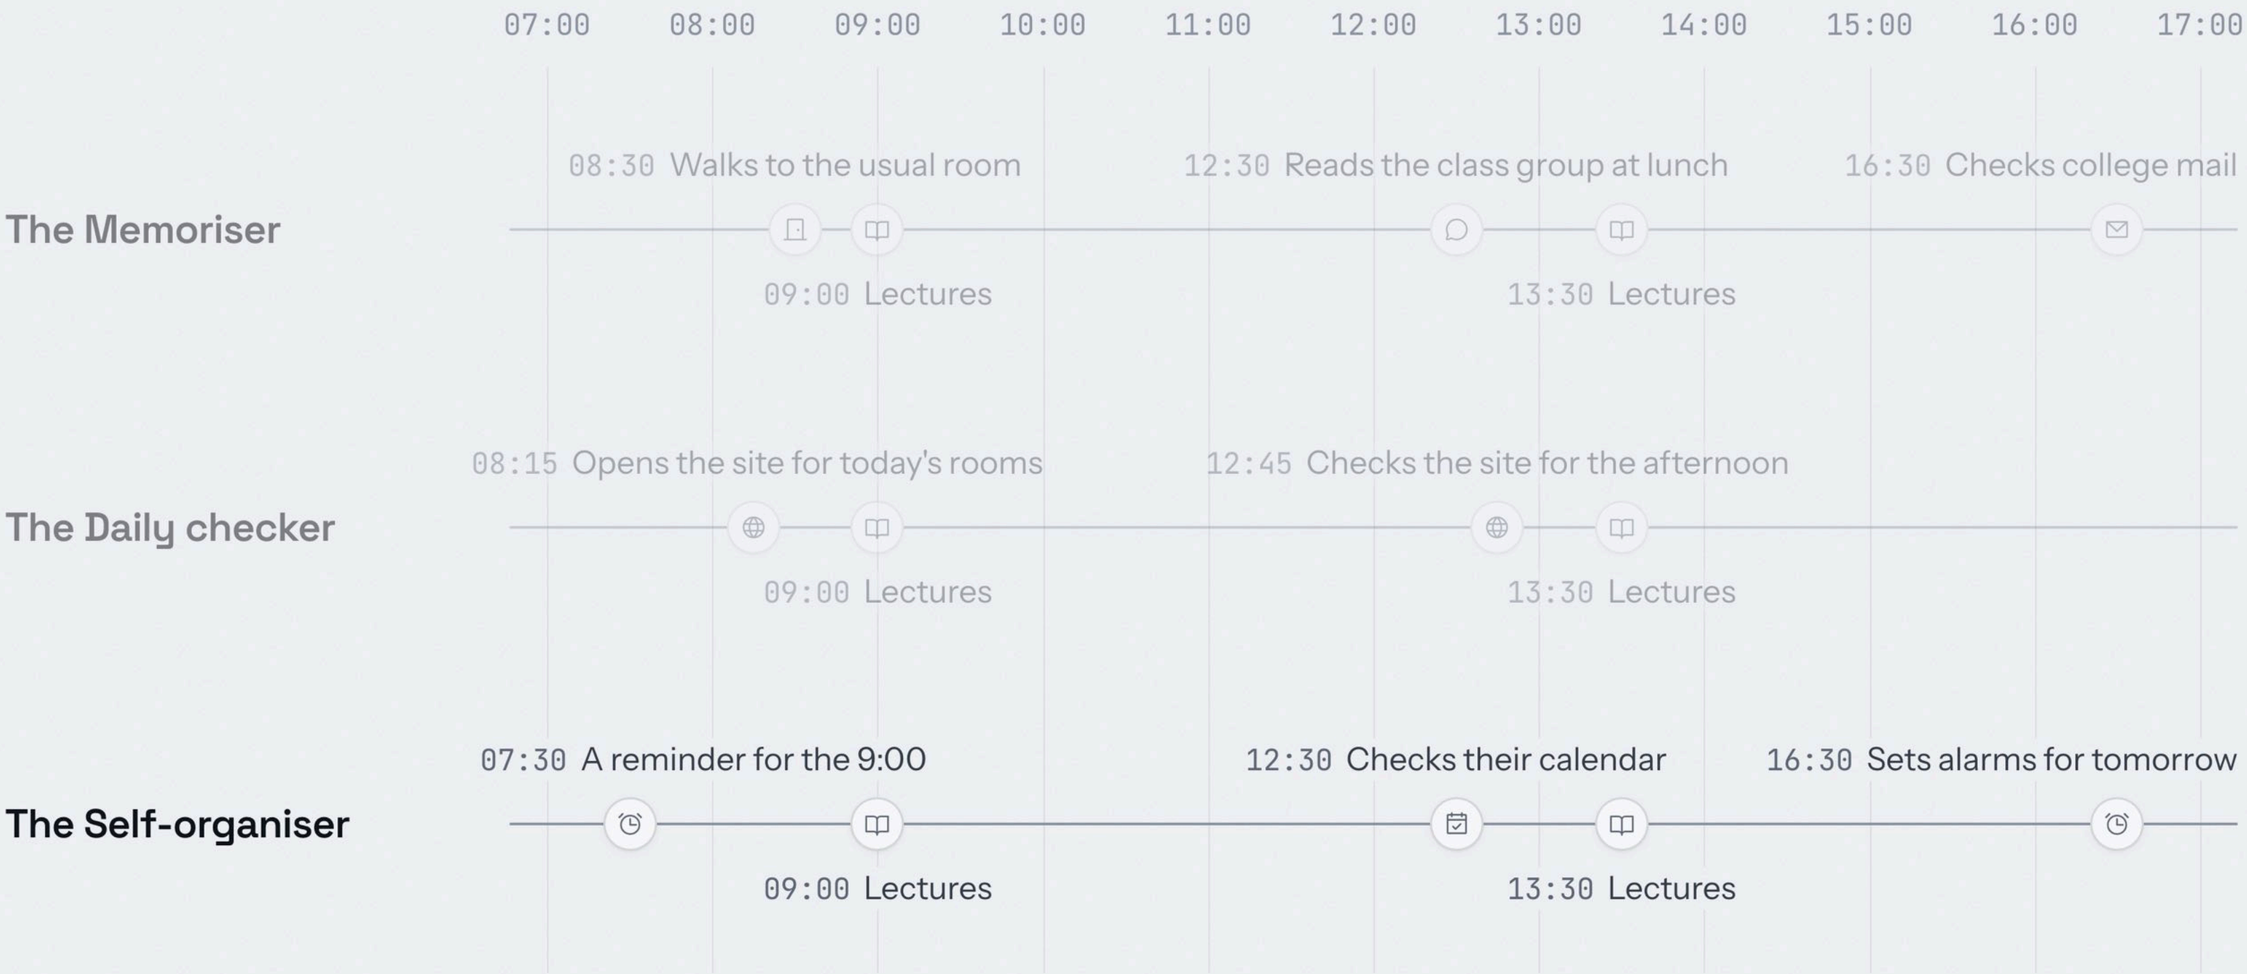

Where do I need to be?

Three apps and four steps, for one question.

- **Open the site**
  on mobile data, and wait
- **Find your division**
  in a grid of the whole college
- **Check Gmail**
  in case something changed
- **Ask the group**
  and hope somebody knows

Three ways through the same day.

Three kinds of student.

The Memoriser

Knows the week by heart; watches for changes.

6 of 15 we asked

- Has the week memorised
- Watches WhatsApp and mail
- Opens the site when a room moves

The Daily checker

Opens the site to find today's room.

8 of 15 we asked

- Checks the site before class
- Picks a semester and major, every visit
- Asks the group if the mail differs

The Self-organiser

Copies the week into their own tools.

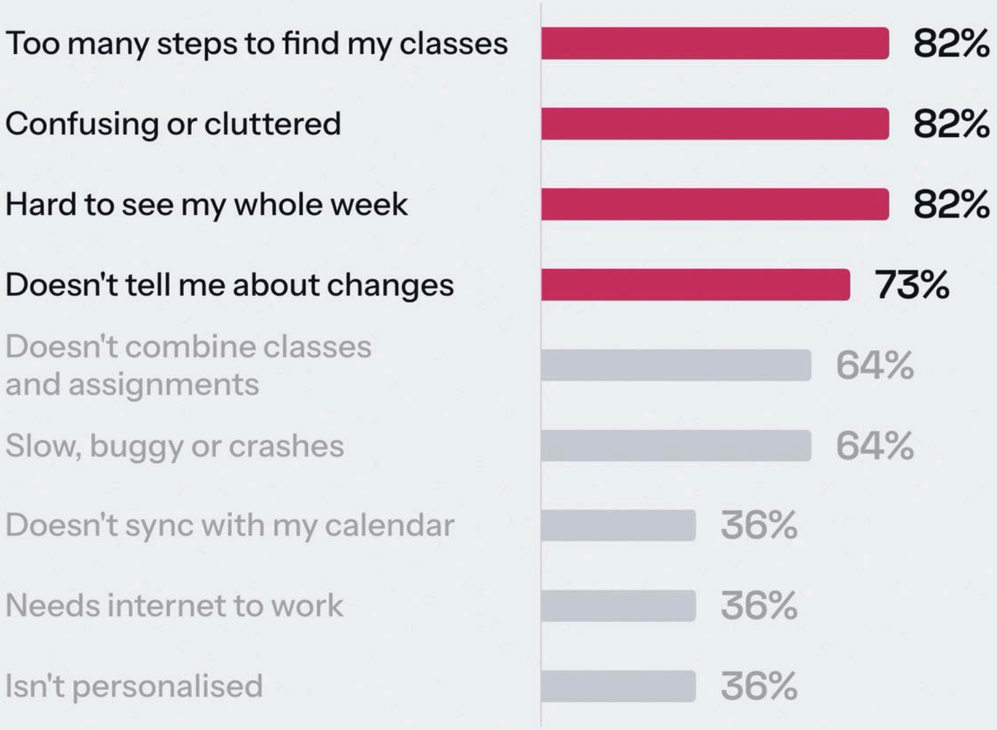

3 of 15 we asked

- Keeps it in a calendar or alarms
- Rarely opens the site
- The copy goes stale on a change

Four problems nearly everyone has.

On Moodle, marks are hardest to find, and deadlines are scattered.

The timetable site

Moodle

Survey of 11 students in their third and fourth year · tick all that apply

Everything they told us.

The timetable doesn't tell us when a class changes

A cluttered, confusing page

Slow, buggy or crashes

Too many steps to find my own classes

Can't see my whole week at a glance

Marks and feedback are hard to find

Doesn't sync with my calendar

Classes and deadlines live in different apps

What hurts most.

Faculty at two institutes.

10
faculty interviewed

2
institutes, SICSR and SIG

12
days, 12 to 23 September

In person and by phone

Their day, then what would help

A handwritten timetable on most desks

> **The lecture ends before I finish all the admin.**
>
> Faculty, SIG

"For every small decision I have to go to the coordinator."

Faculty, SIG

"By now I just remember my schedule."

Faculty, SIG

Two kinds of faculty. Two different jobs.

Internal faculty

Full-time, on campus every day, teaching several groups.

9 of 10 we interviewed

- Opens the timetable, Moodle, the portal and mail
- Sets up and takes attendance after every lecture
- Merges marks from Forms and Moodle in Excel

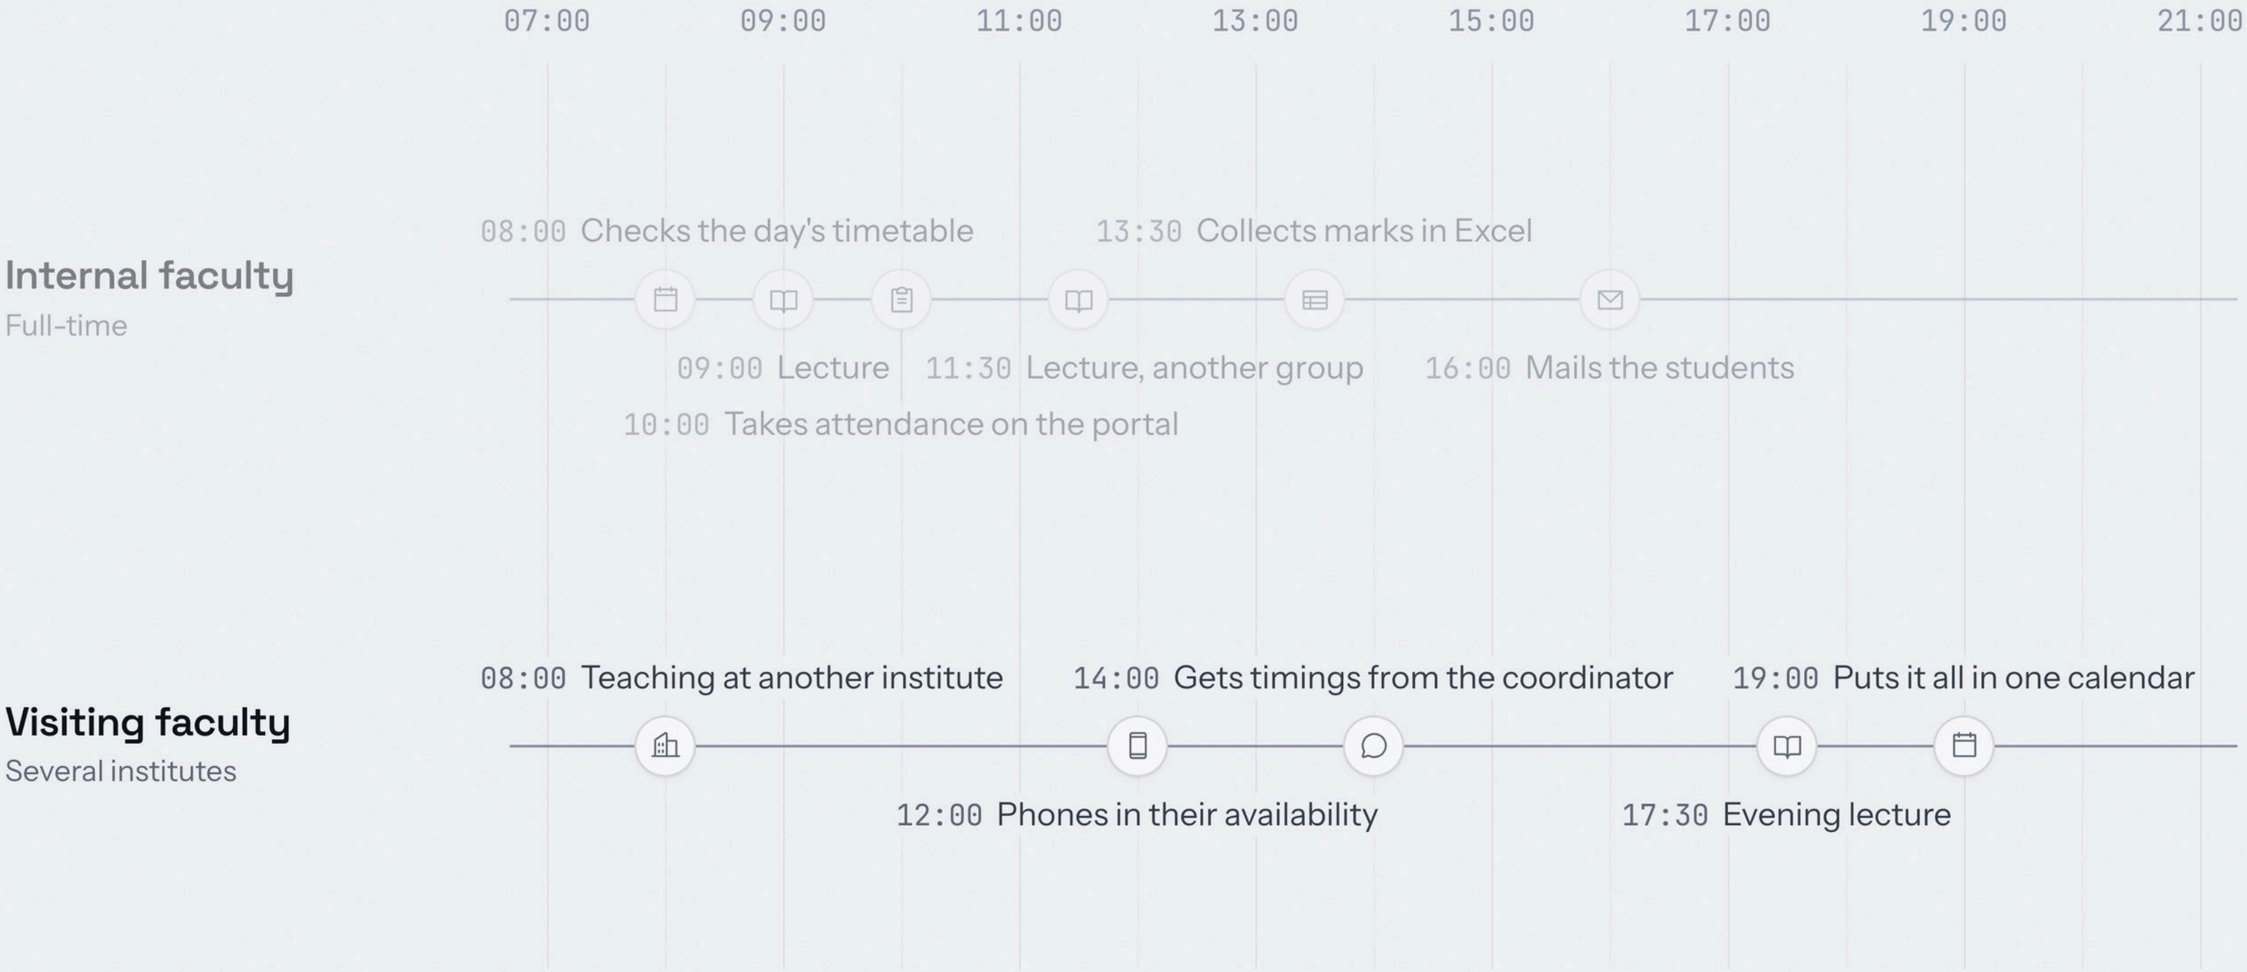

Visiting faculty

Teaches here and at other institutes.

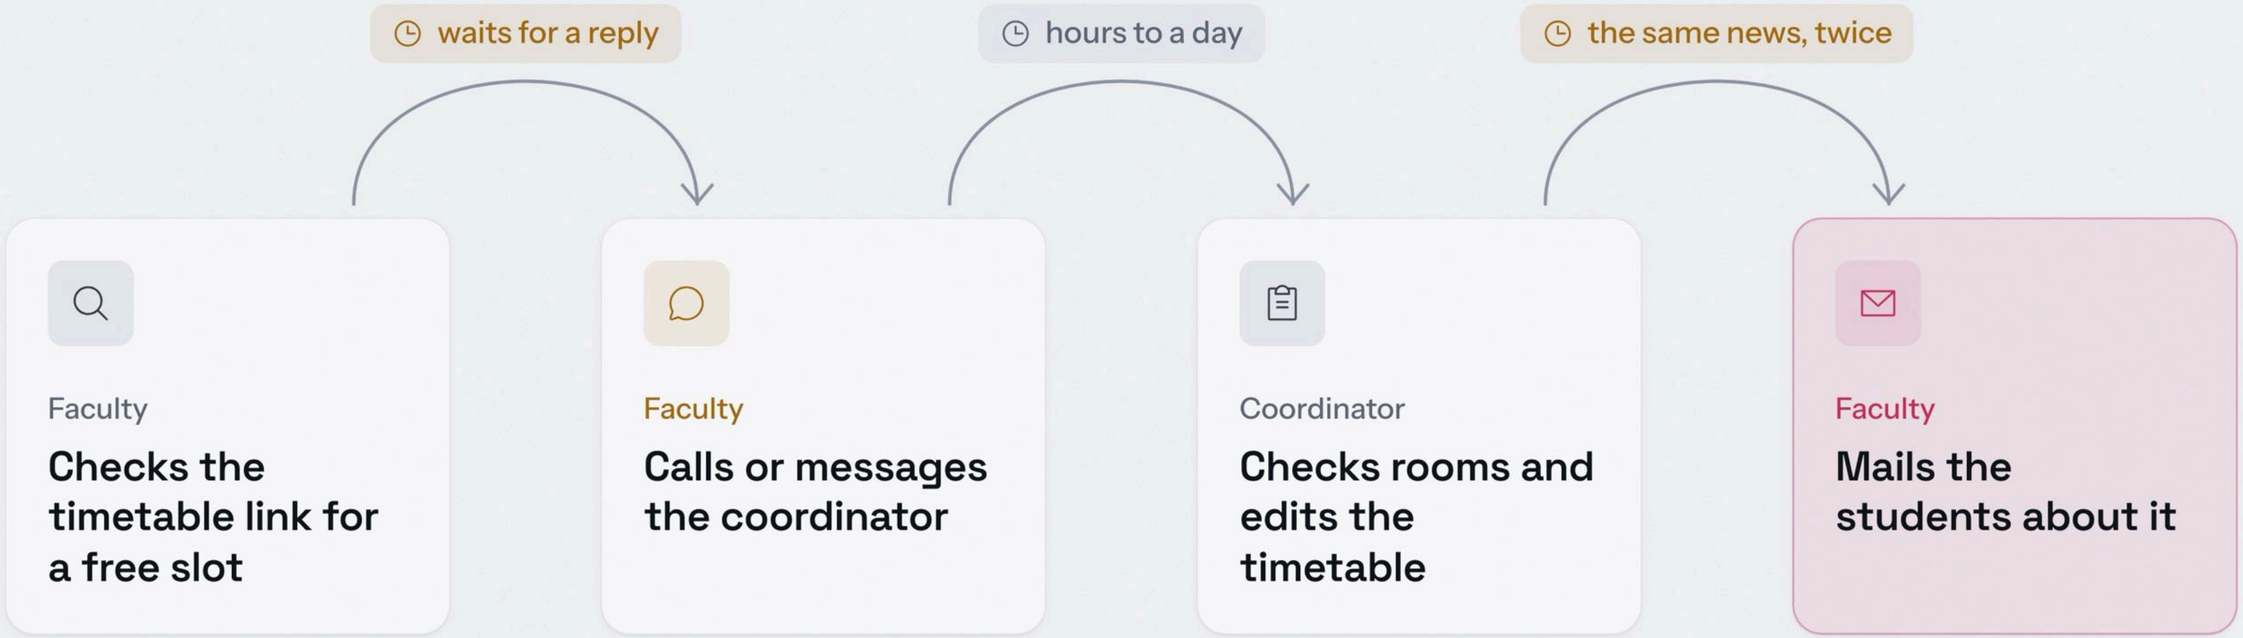

1 of 10 we interviewed

- Phones in their availability, then waits for timings
- Every change goes back through the coordinator
- Keeps one calendar across institutes

Same college, very different days.

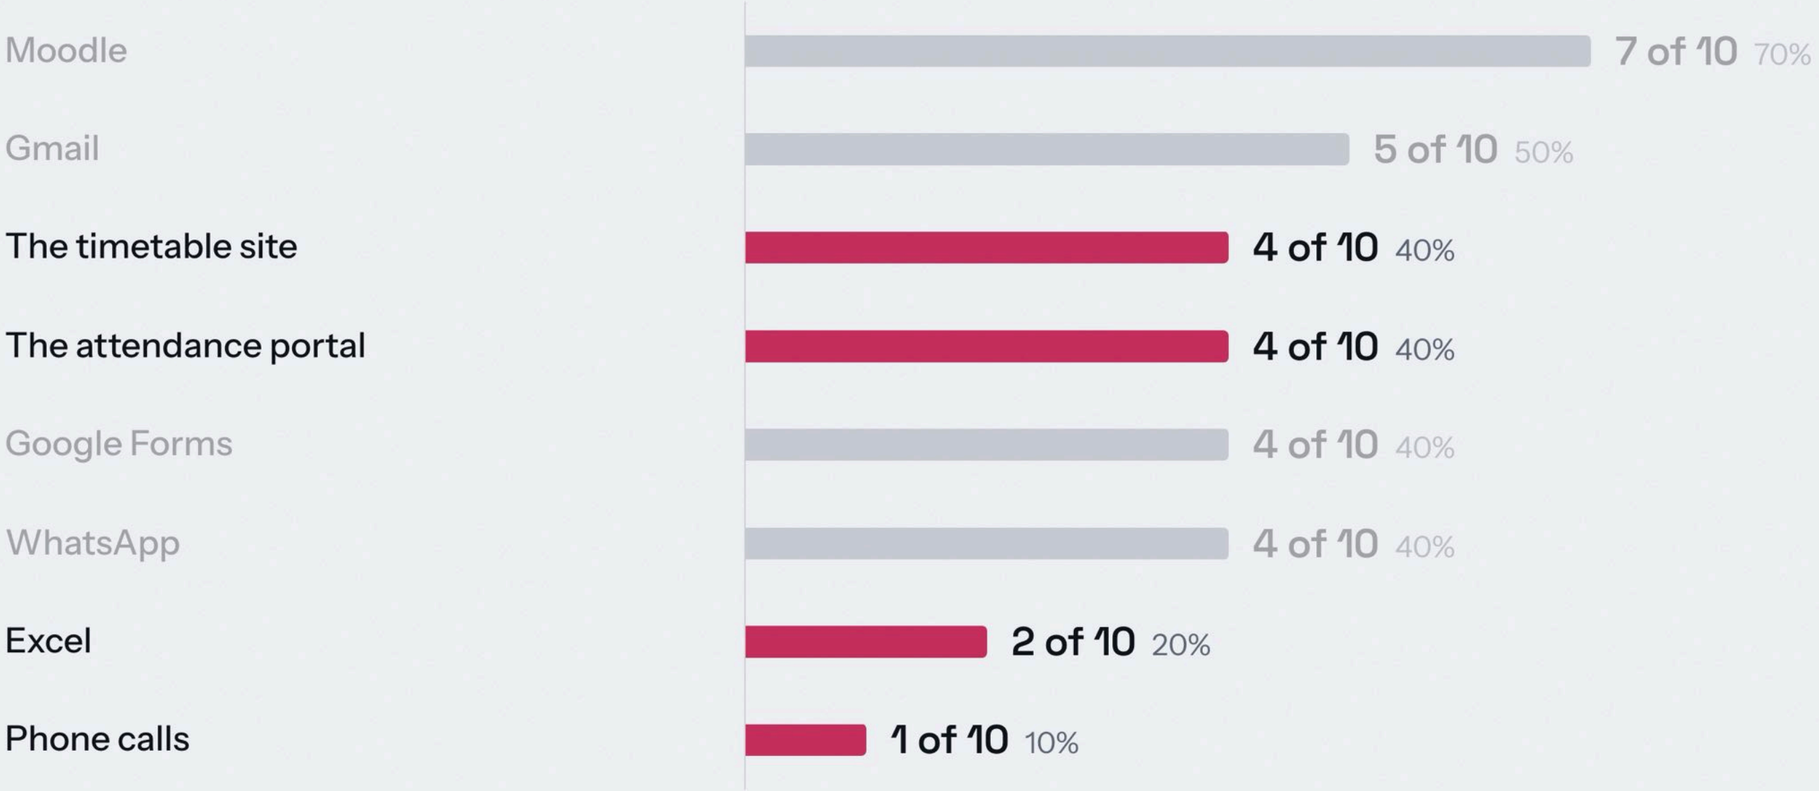

One extra lecture, through two people.

Every step goes through someone else.

Eight tools, about three each.

Plannr takes over four of them: the timetable, attendance, Excel and the calls.

Interviews with 10 faculty at SICSR and SIG, 12 to 23 September 2026

Everything they told us.

Hopping between slow sites all day

Attendance set up and taken by hand, every lecture

Assignment deadlines scattered across platforms

No single place where changes reach them

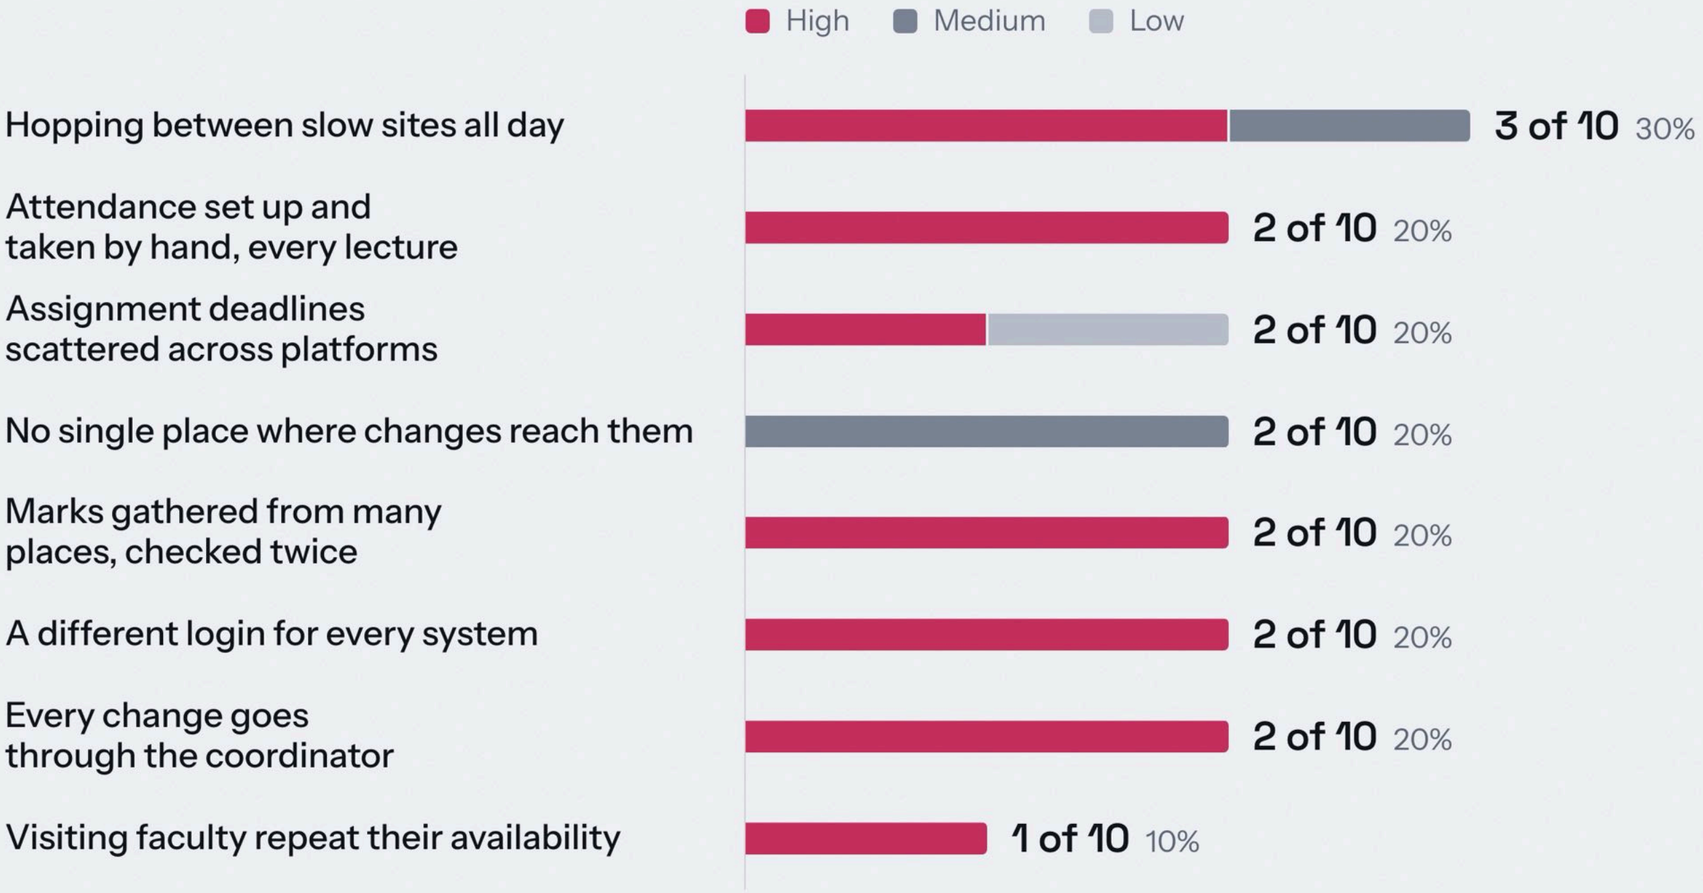

Marks gathered from many places, checked twice

A different login for every system

Every change goes through the coordinator

Visiting faculty repeat their availability

Who raised what, and how much it hurts.

Interviews with 10 faculty · split by their own rating

What hurts most.

		Reach of the people we asked	Severity how much it hurts, of 5	Scope how central to what we automate	Score with scope, out of 100
